

Description of Problem Statement :

- **Crowdsourced Justice for Inhuman Acts**
- People are inhumanly involved with human trafficking, violence, and other ill activities. Most of the crimes are not reported because of fear, unawareness, or the ineffectiveness of the system in reporting the crime. That very factor confirms the reason behind the continuous cycle of abuses and exploitation—the perpetrators go scot-free while the victims continue to suffer.
- Our website focuses on simplifying the process of reporting about human trafficking and Inhuman Activities to government organisations and Ngo's.

Objectives:

1. Our solution focused on minimizing the process of reporting and report submission of the activities to legal authorities
2. We are creating a website using Html, Css, Javascript and React and backend we are using MySQL

Usecase Diagram:

Idea Approach and Tackling:

- We are building a website which includes individual, NGOs, and Legal Authorities so that an individual can report the activities which violates Human rights and Activities like human trafficking and child abuse
- We focused on building a platform where a individual can report the crime by giving evidence of the activity in our website and our website will forward it to the the legal authorities and NGO's
- Our Website includes real time updates, Push Notification, Location based service, User Friendly interface and integration with emergency service

Solution of the problem:

- Our platform provide direct recognition of problem to the legal authorities.
- Provides faster response and actions.
- Arrange awareness campaign and make individuals aware about their rights.

Basic Details of the Team and Problem Statement

Name of your Institute: JD College of Engineering and Management

Team Name: Team Blue

Problem Statement Code:SM24-17

Problem Statement Title: SM24-17: Crowd sourced Justice for Inhuman Acts
